Question: For the bid to be compliant, must a vacuum truck be used? Or can alternative pumping methods be used such as a development pump?

Answer: As long as the focus is on maximizing free product removal, and you are capable of quantifying the amount of product removed, alternate pumping methods could be used.

Question: Do you want groundwater samples collected at both monthly pumping events?

Answer: Samples should be collected after each event.

Question: Can you provide the depth to water for the wells to be vacuumed for the D&B Auto Repair Site?

Answer: Average depth to water is approximately 33 below top of well casing.

Question: Can you provide the well construction forms or soil boring logs for all wells remaining at the D&B Auto Repair site (54661-0065-73-A).

Answer: Well construction forms have been placed on the bidding website.
